

The Nobac 400 Bottle labeller meets the demand for the proven advantages of Nobac linerless labels to be applied to bottles.

The unique feed system results in high speeds coupled with the benefits of a greater number of labels on each reel. The labels are supplied in wide-edge leading format which minimizes the length of material to be fed for the side application of wraparound labelling. After cutting the label from it's reel it is applied to the bottle on a standard wraparound conveyor.

A proven benefit of linerless labels is that, as there is no backing material, changeover time is reduced and breakage of backing material is eliminated, which is especially beneficial in high-speed

operation. Changeover is also easier, with no need to thread a

take up reel. In addition there are no die cut issues which tend to be a problem on conventional pressure sensitive label applicators.

The Nobac 400B does away with wasteful, non-recyclable backing material which makes it friendly to the environment.

The labels may be supplied in a range of weights and materials - including paper and polypropylene. Transparent labels can also be produced and applied.

Round and square bottles are capable of being labelled at speeds of up to 180 per minute.

Standard specification, subject to specific application:
 Label height; 400mm Label width; 80mm Speed; up to 180bpm
 Power supply; 110v/60 Hz Air Supply 5.5 bar 80psi

wraparound
