

FELINS

Automatic Rubber Bander

Elastic Banding

The specific properties of elastic make it very suitable for bundling a wide variety of products.

The advantages of using rubber bands have been known for many years.

- *Rubber bands have a closed shape so that welding or tying the ends together is not necessary.
- *Rubber bands don't distort the product and leaves no marks.
- *Rubber bands are flexible: a few products can be removed from a bundle without compromising bundle integrity.
- *Rubber bands are multi-purpose: large and small products can be bundled using one size rubber band.

Banding with rubber bands has always been undertaken manually. In addition to being labor intensive, it also demands considerable time (not to mention ergonomic concerns). All of which has made rubber banding expensive...until now!

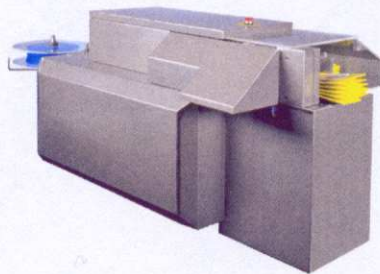

The Felins Automatic Rubber Bander (ARB) is a fully automatic system which provides problem-free rubber banding. This system automatically loads, stretches and applies each band from a continuous roll of hundreds of rubber bands. This means that your products can be banded rapidly.

Large roll lengths and ease of use guarantee a continuous banding process in which every rubber band is used, eliminating packaging material waste.

Because of its high elasticity, the chainbands are suitable for banding irregular shaped products. The chainbands are made from recycled plastic and are available in various colors and sizes.

Fully Automatic Banding

Felins ARB

The Felins ARB (Automatic Rubber Bander) can produce up to 45 bundles per minute.

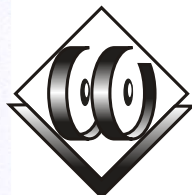

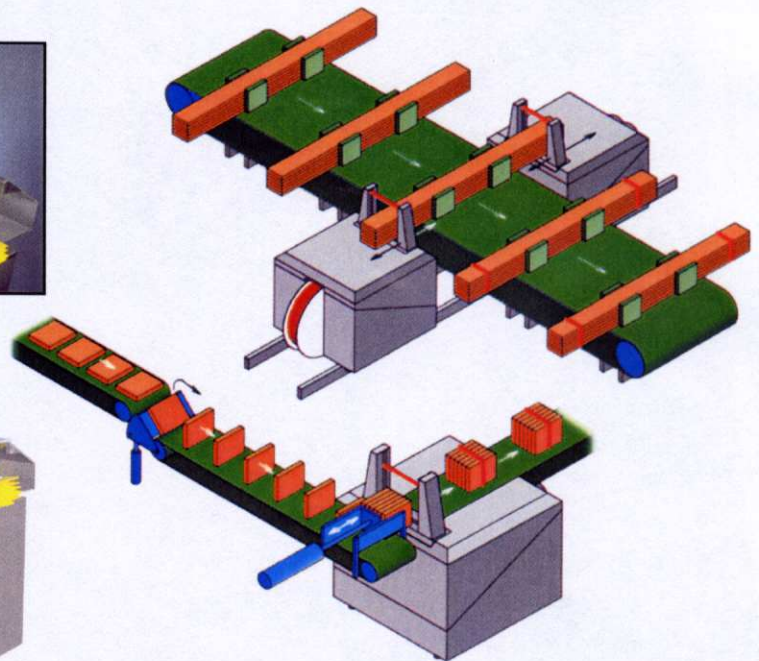

The EB-160 will band products up to 6 1/4" wide and 6 1/2" high, while the EB-400 will band products up to 15 1/2" wide and 6 1/2" high.

Product feed and removal is manual with these stand alone table top models and are available with optional foot trip activation.

The Felins ARB can also be equipped with an automatic label unit. A label is folded around each rubber band before the band is applied, ensuring that your providing each bundle with the right information.

Custom Engineering

Felins Custom Engineering Services can help you design an automated ARB system to meet your specific production requirements. The ARB can also be integrated into your existing packaging line.
