

INTRODUCING **ATS•US-2000** **Pharmaceutical Corner Line Banding System**

featuring Ultra-Sonic Sealing Technology

As seen in *Packaging World Magazine*, this automated system eliminates expensive sleeves, shrink or inner cartons by placing a paper or plastic band around a bundle of small boxed product.

The system takes a single stream of product from the in-feed conveyor. The pusher then moves the accumulated boxes 90° into the ATS Ultra Sonic Banding Machine. The stack gets banded with paper or poly film to complete the bundle.

Available in several versions. Fully automated or semi-automatic feeding for QC inspection.

- Decrease the number of operators
- Less expensive materials
- Accepts a wide range of product sizes including 5 panel boxes

The 1 x 6 configuration seen in this photo decreased the number of operators, increased the bundle quality and reduced energy and material costs by eliminating shrink wrap.

See how your company can benefit from using banding. Visit our web site for more information, including video clips and testimonials from companies like yours that now use banding as a "smart" solution.
